The team works together to provide comprehensive care to each young person.
PREVENTION OF PSYCHOSIS

REACH was created to detect the early warning signs of psychosis in youth and young adults, to provide effective support and treatment.

Early symptoms are unique to each individual, but can be quite challenging. They may affect a person’s ability to complete schoolwork, interact socially, and accomplish daily tasks.

IT’S MORE COMMON THAN WE THINK

3 in 100 individuals develop psychosis, and symptoms are most prominent between the ages of 10-25

Early warning signs and elevated symptoms to look out for:

• Behavior changes such as acting differently, feeling suspicious and afraid, keeping to themselves, or changes to sleeping or eating habits.
• Perceptual changes such as hearing or seeing things that others might not, feeling like someone is playing tricks with their mind, finding reality confusing, or intensified sensitivity to light, sounds, touch, etc.
• Changes in daily life activities such as challenges at school or work, difficulty communicating with others, or socializing with friends or family.

To be eligible for REACH:

• Ages 10-25
• Lives in Santa Clara County
• Medi-Cal eligible or uninsured/unsponsored
• Exhibiting early warning signs or elevated symptoms

With early identification and treatment, it is possible to get back to meaningful activities and improve overall wellness.

CREATING HOPE EMPOWERING DREAMS
